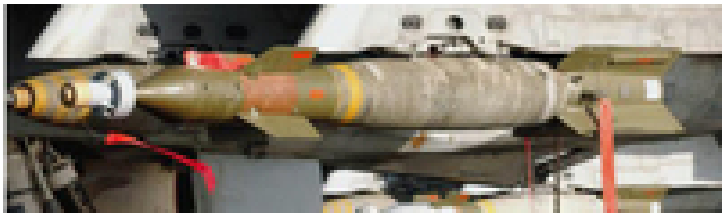
GBU-12/B Paveway I LGB [Mk82] (KMU-388/B)

Guided Weapon



Type: Guided Weapon
Weight: 295.0 kg
Length: 3.2 m
Span: 0.99 m
Length: 3.2 m
Diameter: 0.27
Generation: None

Properties: Illuminate at Launch, Supports Buddy Illumination
Targets: Surface Vessel, Land Structure - Soft, Land Structure - Hardened, Runway, Mobile Target - Soft, Mobile Target - Hardened

Sensors / EW:
- Laser Spot Tracker (LGB) - (Paveway II CCG, Fixed and Mobile) Laser Spot Tracker (LST), LST, Laser Spot Tracker, Max range: 0 km

---

Weapons / Loadouts:
- GBU-12/B Paveway I LGB [Mk82] - (KMU-388/B) Guided Weapon. Surface Max: 7.4 km. Land Max: 7.4 km.

OVERVIEW: The GBU-12/B Paveway I is a laser guided bomb (LGB).

DETAILS: The GBU-12/B Paveway I is intended for precision bombing against non-hardened targets. It consists of a bolt-on gimballed seeker head and Computer Control Group (CCG) and a stabilizing tail airfoil assembly attached to a conventional Mk82 gravity bomb. This converts the Mk82 into a laser-guided weapon that homes in on a reflected laser beam transmitted from a ground or air-based laser designator. A Paveway I-series bomb steers to the target using "bang-bang" guidance, where the control surfaces are always fully deflected. This results in a relatively inefficient flight path. Consequentially, the Paveway I-series has limited standoff capabilities. Its sensor also was limited by mist and fog.

NOTES: IOC 1970. Used by 17 countries.
