

AN/AAQ-14 LANTIRN Pod [FLIR + LRMTS, 12k ft]

Sensor Pod

Type: Sensor Pod

Weight: 211 kg

Length: 2.51 m

Span: 0.38 m

Length: 2.51 m

Diameter: 0.38

Generation: None

Properties: Pod - Night Navigation/Attack (Incl. Bomb, Rocket Delivery)

Sensors / EW:

- AN/AAQ-14 [Laser Designator] - Laser Designator, Laser Target Designator & Ranger (LTD/R), Max range: 27.8 km
- AN/AAQ-14 [FLIR] - Infrared, Infrared, Attack FLIR, Max range: 55.6 km

Weapons / Loadouts:

- AN/AAQ-14 LANTIRN Pod [FLIR + LRMTS, 12k ft] - Sensor Pod.

OVERVIEW: The AN/AAQ-14 is the targeting pod portion of the combined AAQ-13/AAQ-14 Low Altitude Navigation and Targeting Infrared for Night (LANTIRN) system. The AN/AAQ-14 pod allows equipped aircraft to designate targets for attack by laser-guided munitions.

DETAILS: The LANTIRN system consists of two separate but integrated pods mounted externally beneath the aircraft: the AN/AAQ-13 navigation pod and the AN/AAQ-14 targeting pod. The AN/AAQ-14 targeting pod contains a high-resolution, forward-looking infrared sensor (FLIR) and a laser designator/rangefinder housed in a stabilized turret for precise delivery of laser-guided munitions. For a conventional bomb, the laser can be used to determine and feed the target range to the fire control system, simplifying target detection, recognition and attack and allowing aircraft to attack targets with precision-guided weapons on a single pass.

NOTES: Initial deliveries began in March 1987. It has been deployed on the F-16C/D, F-15E/I/S and F-14 aircraft. It has also been purchased by Belgium, Portugal, Holland, Norway and Denmark for use on their F-16s.
