

## **GBU-24D/B Paveway III LGB [BLU-116/B] (USN, 2001, First delivered 1999)**

### **Guided Weapon**

Type: Guided Weapon

Weight: 1065.0 kg

Length: 4.39 m

Span: 2.0 m

Length: 4.39 m

Diameter: 0.46

Generation: None

Properties: Terminal Illumination, Supports Buddy Illumination

Targets: Surface Vessel, Land Structure - Soft, Land Structure - Hardened, Runway, Mobile Target - Soft, Mobile Target - Hardened

Sensors / EW:

- Laser Spot Tracker (LGB) - (Paveway II CCG, Fixed and Mobile) Laser Spot Tracker (LST), LST, Laser Spot Tracker, Max range: 0 km

---

Weapons / Loadouts:

- GBU-24D/B Paveway III LGB [BLU-116/B] - (USN, 2001, First delivered 1999) Guided Weapon. Surface Max: 14.8 km. Land Max: 14.8 km.

---

**OVERVIEW:** The GBU-24D/B Paveway III is a laser guided bomb (LGB).

**DETAILS:** The GBU-24C/B Paveway III is intended for precision bombing against hardened targets. Intended for low-level delivery, it uses a mid-course autopilot and a more sensitive seeker than earlier Paveway I and II. The Paveway III consists of a bolt-on gimballed seeker head and Computer Control Group (CCG) and a stabilizing tail airfoil assembly attached to a conventional BLU-116/B Advanced Unitary Penetrator (AUP) bomb. This converts the BLU-116/B into a laser-guided weapon that homes in on a reflected laser beam transmitted from a ground or air-based laser designator. Unlike the earlier Paveway I and II series, the Paveway III-series bomb uses a microprocessor to provide proportional control to the control surfaces, giving smaller control surface deflections and a smoother flight path, resulting in a significant increase in range over its predecessors. Reported accuracy is 1 meter CEP. The BLU-116/B warhead is capable of penetrating 8-12 feet of reinforced concrete.
